JUNE 1988

The early cave men feared and were ruled by the forces of nature. What changed fear of nature into control of nature?

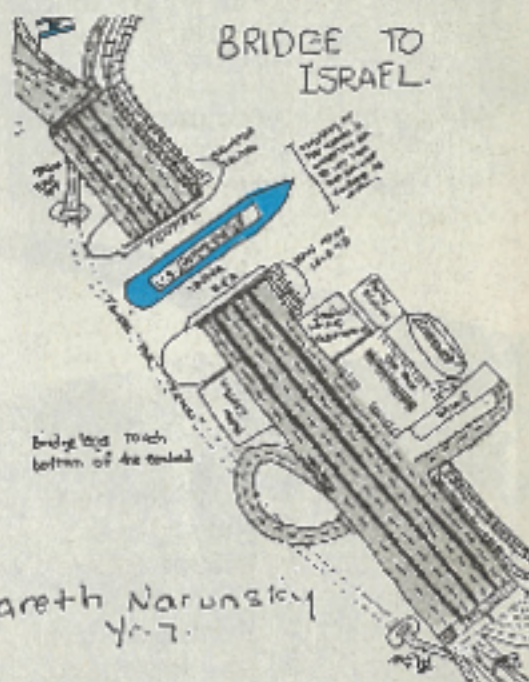

The answer is engineering - which has used various tools to control the great resources of power in nature for the use and convenience of people.

The early Zionist pioneers helped to transform the malaria infested swamp lands and the dry deserts of the then Palestine, into the beautiful green, glorious land of Israel it now is - a process, that is still continuing.

And one of the great engineers in Australian history is Mr. Franco Belgiorno-Nettis. He and Transfield Pty. Ltd., of which he is the Chairman, have helped change Australia into the modern, progressive country it now is.

And, as you will see, Mr. Belgiorno-Nettis' accomplishments extend beyond the fields of engineering into the arts, sports and humanitarian achievements.

The 'engineers' in Sharon Glaser's Yr 6/7 classes, Temple Emanuel School, have come up with novel ways of building bridges between Australia and Israel. You will find these clever innovations throughout this issue.

Gareth Narunsky
Yr 7.

SUPERFAST MONORAIL

A SUPERFAST MONORAIL THAT DOES JUST AS FAST AS A CONCORD WITH HALF THE CONDITIONS LIKE AN AIRPLANE TAKES UP AS MUCH FUEL AS AN AIRPLANE. TRACES ARE NOW USED IN 24 COLORED STEEL STEEL.
